

Complete Final Exam Question Pool

Level	Exam Question Roster
0 - 1	<code>aff_a</code> , <code>aff_z</code> , <code>ft_countdown</code> , <code>hello</code> , <code>maff_alpha</code> , <code>only_z</code> , <code>first_word</code> , <code>ft_putstr</code> , <code>ft_strcpy</code> , <code>ft_strlen</code> , <code>ft_swap</code> , <code>repeat_alpha</code> , <code>rev_print</code> , <code>rot_13</code> , <code>search_and_replace</code> , <code>ulstr</code>
2	<code>alpha_mirror</code> , <code>camel_to_snake</code> , <code>do_op</code> , <code>ft_atoi</code> , <code>ft_strcmp</code> , <code>ft_strdup</code> , <code>ft_strrev</code> , <code>inter</code> , <code>is_power_of_2</code> , <code>last_word</code> , <code>max</code> , <code>print_bits</code> , <code>reverse_bits</code> , <code>snake_to_camel</code> , <code>swap_bits</code> , <code>union</code> , <code>wdmatch</code>
3	<code>add_prime_sum</code> , <code>epur_str</code> , <code>expand_str</code> , <code>ft_atoi_base</code> , <code>ft_list_size</code> , <code>ft_range</code> , <code>ft_rrange</code> , <code>hiddenp</code> , <code>lcm</code> , <code>paramsum</code> , <code>pgcd</code> , <code>print_hex</code> , <code>rstr_capitalizer</code> , <code>str_capitalizer</code> , <code>tab_mult</code>
4	<code>fprime</code> , <code>ft_itoa</code> , <code>ft_list_foreach</code> , <code>ft_list_remove_if</code> , <code>ft_split</code> , <code>rev_wstr</code> , <code>rostring</code> , <code>sort_int_tab</code> , <code>sort_list</code>
5	<code>brainfuck</code> , <code>brackets</code> , <code>check_mate</code> , <code>options</code> , <code>rpn_calc</code>

Daily Campus Execution Plan

Day	Morning Block (7:30 AM - 12:00 PM)	Afternoon Block (1:00 PM - 5:30 PM)
Monday	Push C10 & C11: Focus on writing a robust <code>Makefile</code> , handling system calls (<code>open</code> , <code>read</code> , <code>write</code>), and mastering function pointer syntax.	Level 0-2 Speedrun: Drill <code>inter</code> , <code>union</code> (using the 256-array trick), <code>print_bits</code> , and <code>ft_strcmp</code> purely from memory.
Tuesday	Dominate C12: Implement the core <code>t_list</code> structure. Code functions to create elements, measure size, and push data to the front or back of the linked list.	Level 3 Revision: Code <code>epur_str</code> , <code>expand_str</code> , and dynamic arrays (<code>ft_range</code> , <code>ft_rrange</code>) strictly without notes. Focus on preventing memory leaks.

Wednesday	Explore C13: Understand binary tree structures and basic traversal functions (<code>btree_apply_inorder</code> , <code>btree_insert_data</code>).	Level 4 Mastery: Write <code>ft_split</code> and <code>ft_itoa</code> repeatedly until flawless. Lock down the <code>INT_MIN</code> and backwards-filling logic.
Thursday	Advanced List Ops: Revise passing function pointers into linked lists (<code>ft_list_foreach</code> , <code>sort_list</code>) and handling node deletion (<code>ft_list_remove_if</code>).	Level 5 Sim: Attempt <code>brainfuck</code> and <code>brackets</code> . Dedicate the final hours to a full, timed mock exam run in the terminal.
